

PRODUCT DATA

# PLASTEEL SEAL

## Wire Seal for General Purpose Meter Sealing

Plasteel Wire Seal With Polycarbonate Body, Stainless Steel Insert, with various wire options and Standard Imprint Option (pictured)

Available with Multi Strand Stainless Steel, Copper, PVC Coated Steel Wire and Kevlar Wire in a variety of lengths

Pressing of plunger attains complete locking. Wire cannot be backed out or pulled out

Standard imprint includes up to 7 alpha characters and a 7 digit sequential Serial number

Clear body (standard) reveals any tampering attempts

Installation is easy and requires no tools

## Features

- Unique Combination of Plastic & Steel
- Tamper Resistant
- Environmentally Safe
- No Tools Required for Installation
- Body made of Polycarbonate for Long Term Life and Weather Resistance
- Standard Clear Body Reveals Tampering.
- Shipped Assembled and Ready to Install
- [Tamper proof even on Boiling water dip & attempt by petrochemicals & Solvents](#)

The PLASTEEL seals are made of High Grade Polycarbonate material (Grade LV-20 of M/s. DuPont, Singapore or Grade R123 of M/s. GE Plastics), which is far ahead, then conventional Polypropylene as the polycarbonate poses high melting point and great tensile strength apart from long life of 20 years and more. The presence of Steel as male part or locking plunger gives this seal and extraordinary edge then usual complete plastic seals. The presence of Steel makes sure that seal cannot be tampered in case of attack by petrochemicals based solvents etc.

**WIRE OPTIONS: Multithreaded wire of Stainless Steel & Galvanized Iron and Monell Wire.**

**CONSECUTIVE NUMBERING :** Non repeating 7 digit sequential numbering is done using LASER marking/engraving (in Black Color), totally indeleble.

**Personalization :** Co. LOGO can be molded during manufacturing process for personalization.
